Vol. 24 1982

INDEXES

KEY TO ISSUES

Part 1	January	pages	1- 56
2	March		57-112
3	May		113-172
4	July		173-236
5	September		237-296
6	November		297-360

REGULAR FEATURES AND SHORT ITEMS

Annual Conference 328, 331
Bookcase 42, 85, 153, 219, 272, 336
Book reviews 42, 85, 153, 219, 336
Certification 157
Comment 7, 63, 119, 179, 301
Correspondence 7, 63, 119, 179, 243
Diploma examination 295
In other journals 44, 87, 154, 220, 274, 338
Institute file 51, 107, 167, 229, 290, 350
John Grimwade Medal 229
Minitest questions 54, 207, 327
NDT Industry 46, 103, 157, 222, 277, 340
People 52, 109, 168, 231, 290, 350
Products and services 48, 161, 224, 282
Profiles 56, 112, 172, 236, 296
Standards news 44, 86, 154, 220, 272, 338
Symposium reports
- Pipeline inspection in the '80s 40
- Testing aerospace raw material 83
- Automated ultrasonic testing 218

Trade literature 42, 86, 154, 219, 272

AUTHOR INDEX

AALTIO, M.
On the detection of weld defects by X-ray and ultrasonic examination 33-36

BALAJI, K. S.
D.C. Potential as an effective NDT tool for identifying material grades used in the manufacture and supply of boiler-quality seamless steel tubes 140-141

BASSIM, M. N.
Acoustic emission monitoring of large structures under corrosive environment 259-262

BENTLEY, P. G.
Acoustic emission examination of nuclear steam drums 245-250

BRANT, C.
Computer-controlled ultrasonic testing of aircraft structures 316-320

CLARK, J. N.
The detection of creep failure at welds by acoustic emission.
Part 1: Brittle creep rupture 9-21
Part 2: Ductile creep failure 22-26

COMRAD
Notes on condition monitoring. No. 1. Ferrography 208-209
No. 2. Radiation pyrometry for gas turbine engines 268-269

DAVIES, R. J.
Acoustic emission examination of nuclear steam drums 245-250

DAWSON, D. G.
Acoustic emission monitoring of nuclear steam drums 245-250

DEUTSCH, V.
A comparison of A.C. and D.C. fields for magnetic particle methods 189-195

FORSTEN, J.
On the detection of weld defects by X-ray and ultrasonic examination 33-36

GOWRISANKARAN, S.
A practical method for the identification of material used in the manufacture of seamless steel tubes and pipes, using a demagnetiser 82

GOWRISANKARAN, G.
D.C. Potential as an effective NDT tool for identifying material grades used in the manufacture and supply of boiler-quality seamless steel tubes 140-141

GUEHRING, W. H.
The latest techniques and instruments for measuring the thickness of metallic coatings.
Part 1 251-258
Part 2 321-326

HOPE, H. A.
Sensitivity setting for ultrasonic testing 271

IBRAHIM, S. I.
Ultrasonic inspection of fatigue cracks in the HAZ of austenitic weldments, using shear wave probes . 65-74

Vol. 24 1982

AUTHOR INDEX

AALTIO, M.
On the detection of weld defects by X-ray and ultrasonic examination 33-36

BALAJI, K. S.
D.C. Potential as an effective NDT tool for identifying material grades used in the manufacture and supply of boiler-quality seamless steel tubes 140-141

BASSIM, M. N.
Acoustic emission monitoring of large structures under corrosive environment 259-262

BENTLEY, P. G.
Acoustic emission examination of nuclear steam drums 245-250

BRANT, C.
Computer-controlled ultrasonic testing of aircraft structures 316-320

CLARK, J. N.
The detection of creep failure at welds by acoustic emission.
Part 1: Brittle creep rupture 9-21
Part 2: Ductile creep failure 22-26

COMRAD
Notes on condition monitoring. No. 1. Ferrography 208-209
No. 2. Radiation pyrometry for gas turbine engines 268-269

DAVIES, R. J.
Acoustic emission examination of nuclear steam drums 245-250

DAWSON, D. G.
Acoustic emission monitoring of nuclear steam drums 245-250

DEUTSCH, V.
A comparison of A.C. and D.C. fields for magnetic particle methods 189-195

FORSTEN, J.
On the detection of weld defects by X-ray and ultrasonic examination 33-36

GOWRISANKARAN, S.
A practical method for the identification of material used in the manufacture of seamless steel tubes and pipes, using a demagnetiser 82

GOWRISANKARAN, G.
D.C. Potential as an effective NDT tool for identifying material grades used in the manufacture and supply of boiler-quality seamless steel tubes 140-141

GUEHRING, W. H.
The latest techniques and instruments for measuring the thickness of metallic coatings.
Part 1 251-258
Part 2 321-326

HOPE, H. A.
Sensitivity setting for ultrasonic testing 271

IBRAHIM, S. I.
Ultrasonic inspection of fatigue cracks in the HAZ of austenitic weldments, using shear wave probes . 65-74

KAPRANOS, P. A.
Ultrasonic inspection of fatigue cracks in the HAZ of austenitic weldments, using shear wave probes . 65-74

KAPRANOS, P. A.
Ultrasonic inspection of fatigue cracks in austenitic 316 and 347 weldments 129-134

KEAR, P. E.
Microporosity detection by ultrasonics 37-39

LAMOTTE, E. de
Microporosity detection by ultrasonics 37-39

LEE, S. S.
Thermal non-destructive testing of fiberglass laminate containing simulated flaws orthogonal to the surface, using liquid crystals 76-81

LUMB, R. F.
Non-destructive testing of pipeline girth welds in the 1980s 197-207

MAHER, A.
Computer-controlled ultrasonic testing of aircraft structures 316-320

MAHOON, A.
Computer-controlled ultrasonic testing of aircraft structures 316-320

NICHOLS, R. W.
The role of NDT in assuring the integrity of PWR pressure vessels 215-217

NICHOLSON, S.
The role of NDT within Q.A. programmes applied to pressure vessels and other process plant 121-127

PACKER, T. W.
Non-destructive inspection of glass-reinforced plastics 135-138

PARISH, R. W.
Microporosity detection by ultrasonics 37-39

PARISH, R. W.
Fine-focus X-ray fluoroscopy 210-213

PIRON, D. L.
Acoustic emission monitoring of large structures under corrosive environment 259-262

REYNOLDS, W. N.
Non-destructive inspection of glass-reinforced plastics 135-138

REYNOLDS, W. N.
The detection of small defects in ceramic materials: a comparison of ultrasonic and radiographic methods 145-151

SAEKI, Y.
A proposed theory of mottling of radiographs of stainless steel welds 181-187

SERABIAN, S.
Ultrasonic size determination of inclined flaws — use of maximum flaw response 311-315

SHARPE, R. S.
Organisation and range of NDT research in the UK 303-310

SMITH, R. L.
The detection of small defects in ceramic materials: a comparison of ultrasonic and radiographic methods 145-151

STEWART, P. A. E.
Advances in radiography and fluoroscopy 27-32

VENKATESAN, P. S.
A practical method for the identification of material used in the manufacture of seamless steel tubes and pipes, using a demagnetiser 82

VOGT, M.
A comparison of A.C. and D.C. fields for magnetic particle methods 189-195

WATANABE, T.
A proposed theory of mottling of radiographs of stainless steel welds 181-187

WHITTAKER, V. N.
Ultrasonic inspection of fatigue cracks in the HAZ of austenitic weldments, using shear wave probes . 65-74

WHITTAKER, V. N.
Ultrasonic inspection of fatigue cracks in austenitic 316 and 347 weldments 129-134

WILLIAMS, J. H.
Thermal non-destructive testing of fiberglass laminate containing simulated flaws orthogonal to the surface, using liquid crystals 76-81

WONG, B. S.
Thick section radiography using a microfocus X-ray unit. The advantages of low temperature and various film-screen combinations 263-264

WYSNEWSKI, R.
A.S.T.M. image quality evaluation 266-267

SUBJECT INDEX

ACOUSTIC EMISSION
The detection of creep failure at welds by acoustic emission. J. N. Clark.
Part 1 9-21
Part 2 22-26
Acoustic emission examination of nuclear steam drums. P. G. Bentley; R. J. Davies; D. G. Dawson 245-250
Acoustic emission monitoring of large structures under corrosive environment. M. N. Bassim; D. L. Piron 259-262

AIRCRAFT
Computer-controlled ultrasonic testing of aircraft structures. A. Mahoon; C. Brant; A. Maher 316-320

CERAMICS
The detection of small defects in ceramic materials: a comparison of ultrasonic and radiographic methods. W. N. Reynolds; R. L. Smith 145-152

COATING THICKNESS MEASUREMENT
The latest techniques and instruments for measuring the thickness of metallic coatings. W. H. Guehring.
Part 1 251-258
Part 2 321-327

CONDITION MONITORING
Notes on condition monitoring — ferrography, an introduction. COMRAD 208-209
— radiation pyrometry for gas turbine engines — an introduction 268-270

CORROSION
Acoustic emission monitoring of large structures under corrosive environment. M. N. Bassim; D. L. Piron 259-262

CRACK DETECTION
Ultrasonic inspection of fatigue cracks in the HAZ of austenitic weldments, using shear wave probes. S. I. Ibrahim; P. A. Kapranos; V. N. Whittaker .. 65-75
Ultrasonic inspection of fatigue cracks in austenitic 316 and 347 weldments. P. A. Kapranos; V. N. Whittaker 129-134

D.C. POTENTIAL METHODS
D.C. potential as an effective NDT tool for identifying material grades used in the manufacture and supply of boiler-quality seamless steel tubes. K. S. Balaji; S. Gowrisankaran 140-144

FERROGRAPHY
Notes on condition monitoring. No 1. Ferrography — an introduction 208-209

FLUOROSCOPY
Advances in radiography and fluoroscopy. P. A. E. Stewart 27-32
Fine-focus X-ray fluoroscopy. R. W. Parish 210-214

G.R.P.
Thermal non-destructive testing of fiberglass laminate containing simulated flaws orthogonal to the surface, using liquid crystals. S. S. Lee; J. H. Williams 76-81
Non-destructive inspection of glass-reinforced plastics. T. W. Packer; W. N. Reynolds 135-139

IMAGE QUALITY (RADIOGRAPHIC)
A.S.T.M. image quality evaluation. R. Wysnewski 266-267

MAGNETIC PARTICLE METHODS
A comparison of A.C. and D.C. fields for magnetic particle methods. V. Deutsch; M. Vogt 189-196

MATERIAL SORTING
A practical method for the identification of material used in the manufacture of seamless steel tubes and pipes, using a demagnetiser. S. P. Ventkatesan; S. Gowrisankaran 82
D.C. potential as an effective NDT tool for identifying material grades used in the manufacture and supply of boiler-quality seamless steel tubes. K. S. Balaji; S. Gowrisankaran 140-144

MICROPOROSITY
Microporosity detection by ultrasonics. R. W. Parish; P. E. Kear; E. de Lamotte 37-39

PIPELINE TESTING
Non-destructive testing of pipeline girth welds in the 1980s. R. F. Lumb 197-207

PRESSURE VESSEL TESTING
The role of NDT within Q.A. programmes applied to pressure vessels and other process plant. S. Nicholson 121-128
Acoustic emission examination of nuclear steam drums. P. G. Bentley; R. J. Davies; D. G. Dawson 245-250
The role of NDT in assuring the integrity of PWR pressure vessels. R. W. Nichols 215-217

QUALITY ASSURANCE
The role of NDT within Q.A. programmes applied to pressure vessels and other process plant. S. Nicholson 121-128

RADIOGRAPHY
Advances in radiography and fluoroscopy. P. A. E. Stewart 27-32
The detection of small defects in ceramic materials; a comparison of ultrasonic and radiographic methods. W. N. Reynolds; R. L. Smith 145-152
A proposed theory of mottling of radiographs of stainless steel welds. T. Watanabe; Y. Saeki 181-188
Thick section radiography using a microfocus X-ray unit. The advantages of low temperature and various film-screen combinations. B. S. Wong 263-265
A.S.T.M. image quality evaluation. R. Wysnewski 266-267

RADIATION PYROMETRY
Radiation pyrometry for gas turbine engines. COMRAD 268-270

RESEARCH
Organisation and range of NDT research in the UK. R. S. Sharpe 303-310

THERMAL METHODS
Thermal non-destructive testing of fiberglass laminate containing simulated flaws orthogonal to the surface, using liquid crystals. S. S. Lee; J. H. Williams 76-81

TUBE TESTING
D.C. potential as an effective NDT tool for identifying material grades used in the manufacture and supply of boiler-quality seamless steel tubes. K. S. Balaji; S. Gowrisankaran 140-144

ULTRASONIC TESTING
On the detection of weld defects by X-ray and ultrasonic examination. J. Forsten; M. Aaltio 33-36
Microporosity detection by ultrasonics. R. W. Parish; P. E. Kear; E. de Lamotte 37-39
Ultrasonic inspection of fatigue cracks in the HAZ of austenitic weldments, using shear wave probes. S. I. Ibrahim; P. A. Kapranos; V. N. Whittaker .. 65-75
Ultrasonic inspection of fatigue cracks in austenitic 316 and 347 weldments. P. A. Kapranos; V. N. Whittaker 129-134
The detection of small defects in ceramic materials; a comparison of ultrasonic and radiographic methods. W. N. Reynolds; R. L. Smith 145-152
Sensitivity setting for ultrasonic testing. H. A. Hope 271
Ultrasonic size determinations of inclined flaws — use of maximum flaw response. S. Serabian 311-315
Computer-controlled ultrasonic testing of aircraft structures. A. Mahoon; C. Brant; A. Maher 316-320

WELD TESTING
The detection of creep failure at welds by acoustic emission. J. N. Clark 9-26
On the detection of weld defects by X-ray and ultrasonic examination. J. Forsten; M. Aaltio 33-36
Ultrasonic inspection of fatigue cracks in the HAZ of austenitic weldments, using shear wave probes. S. I. Ibrahim; P. A. Kapranos; V. N. Whittaker .. 65-75
Ultrasonic inspection of fatigue cracks in austenitic 316 and 347 weldments. P. A. Kapranos; V. N. Whittaker 129-134
A proposed theory of mottling of radiographs of stainless steel welds. T. Watanabe; Y. Saeki 181-188
Non-destructive testing of pipeline girth welds in the 1980s. R. F. Lumb 197-207
